## Power quality filter totally cancels surges

Sensitive, mission-critical equipment used in military, medical, and industrial applications requires as much circuit protection as possible. However, the complete elimination of surges has been something outside the realm of possibility of traditional shunt-mode and series-mode protection devices.

### *ZeroSurge's WVR-TSC power quality filter*

Operable over the 85 to 265-V range, the patented WVR-TSC power quality filters are the industry's first to provide total surge cancellation by filtering off the most dangerous surge frequencies and canceling the remaining residual surge voltage.
