TECH NOTE

Using Zero Surge Protection With an Uninterruptible Power Supply (UPS)

Zero Surge™ plugged into building power

UPS plugged into Zero Surge™ unit

Zero Surge™ can't protect the UPS in this configuration!
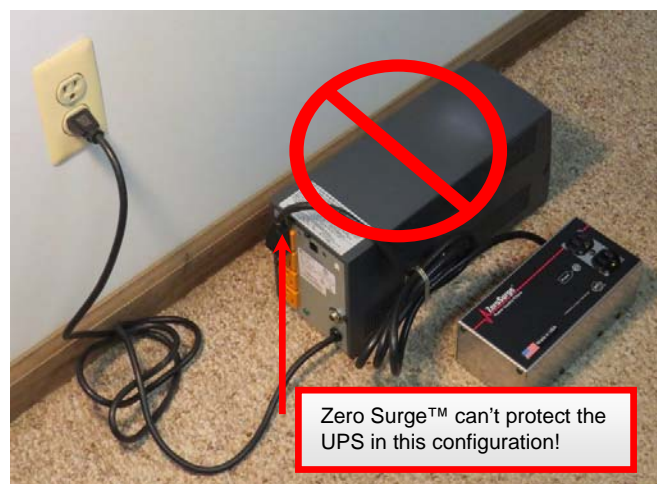

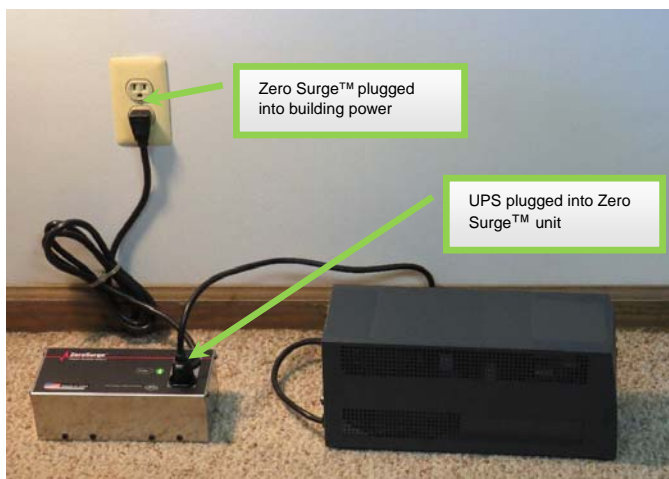

When using Zero Surge products with a UPS, the Zero Surge unit must be ahead of the UPS to protect the UPS and its connected equipment. Simply plug the Zero Surge unit into the wall outlet, plug the UPS into the Zero Surge unit, and plug the sensitive electronics into the UPS. This will also insure that the MOVs inside the UPS remain dormant, preventing ground line contamination.

Zero Surge's 2R15W, 2R20W, and 1U-30A models are recommended for UPS applications.
